Almost Half the Time, Almost Half the Price...

Dr Nikolaos Lilis is proud to offer the amazing Fastbraces® Technology. Call or email us to discover how Dr Nikolaos Lilis and Fastbraces® Technology can team up to give you a smile that you have always dreamed of.

What is Fastbraces®? Fastbraces® were developed to straighten teeth differently. Fastbraces® is the revolutionary system of fast, safe, easy and affordable braces that is changing the field of orthodontics. It is a complete, non-extraction system for most cases, which provides patients with outstanding results.

How does it work? Traditional braces move teeth into position in two stages, usually over a period of about two years. In the first year, the crown of the tooth is moved into alignment. In the second year, treatment addresses the position of the root of the tooth. However, the brackets used with Fastbraces® work on a different mechanical principle altogether. The patented system uses an innovative triangular bracket and a specially- shaped square wire to correct the position of the root of the tooth, from the beginning of treatment. This combination is key in realigning the root and crown simultaneously.

How long is Treatment Time? Fastbraces® Technology gently allows for movement of the roots of the teeth towards their final position from the onset of treatment, achieving root parallelism at the beginning stages, thus completing treatment from 3 months to about a year. Some patients see results in just weeks!

Successful Smiles: Since Fastbraces® Technology was first introduced in 1992, there have been great success stories around the world. Both children and adults have seen the benefits of this innovative system. The confidence that is gained from having a healthy, beautiful smile is priceless. Fastbraces® Technology has been the key to a happier life – both personally and professionally, for thousands of patients around the world.
